

## Server Actions:

---

1. Corrected the theme configuration.
  2. Investigated visual.stims@idgt.me email account for issues and found that:
    - a. It is receiving emails
    - b. It is working in Usermin
    - c. It is an **email only** account.
    - d. My recommendation is to **reset the passphrase**, **delete it from your desktop outlook client** and **add it back**. After its added back **run a synchronization task on the account** and **make sure outlook** synchronized visual.stims' Usermin emails to your local outlook client.
      - i. Another beneficial move would be to create a forward rule in Usermin that forwards that accounts mail to an outlook or google email you use often.
